

## Logic Trends partners with Ohio Department of Health, to deploy the enterprise version of BMC's Identity Management for .NET

Atlanta, GA, and Columbus, Oh., July 30, 2006

Logic Trends Inc®, a Professional Services organization within the Identity Management space, announced a successful deployment of BMC Identity Management for .NET Enterprise Edition to provide Access Control and Identity Management for the Ohio Department of Health.

Ohio Department of Health currently has 2 Single Sign On processes, applications that utilize SQL Server and applications that utilize Oracle Server for Single Sign On. ODH has implemented these two primary applications (LHD Directory and CertLicensure) into a new Enterprise Single Sign On (ESSO) infrastructure (BMC WAM 5.2) and will continue to roll out the remaining 25-35 applications into the new ESSO infrastructure.

BMC Web Access Manager for .NET secures Web applications and manages security policies of e-businesses with complex business relationships and increasingly large numbers of online users. The Enterprise Edition, as deployed at ODH, includes provisioning and Business Process Management.

Logic Trends provided Ohio Department of Health the knowledge and expertise to help ensure successful, timely, and on-budget deployment. "The fact that BMC Identity Management for .NET leveraged Ohio Department of Health's native Microsoft infrastructure it enabled Logic Trends to quickly deploy, integrate and realize the value of enterprise identity and access management," said Andrew Ames, VP of Sales and Marketing for Logic Trends. Logic Trends and BMC have partnered on numerous deployments of the BMC Identity Management for .NET, proving the enterprise capabilities and customer successes available with the solution offering.
