

Logic Trends enhances Role Management for Enterprise Identity & Access Management

ATLANTA, GEORGIA – April 27, 2007 – Logic Trends, Inc. a leading services, consulting and systems integration firm focused on Security, Identity and Access Management has secured partnerships with leading Role Management and Engineering (RME) vendors. With these partnerships, Logic Trends secures the expertise and knowledge to support the many facets of enterprise Identity and Access Management solutions, and further solidifies their leadership and knowledge in the space.

Regulatory compliance pressures, especially the Sarbanes-Oxley Act and the Health Insurance Portability and Accountability Act (HIPAA) in the U.S., are driving RME into many enterprises' IdM initiatives. Hence, the role becomes the key control point for mapping of authorization entitlements that enterprises need to manage in a life cycle manner, just as they do an identity.

Role management (RME) tools handle enterprise roles from a security administration perspective. RME enables organizations to mine, map, manage and report on the complex relationships of users, business rules and the entitlements assigned to them within the IT infrastructure.

Leveraging Logic Trends proven IAM5 methodology, and our lead RME partners technology, we see considerable benefits from the ability to quickly address customer pain points with more balanced product portfolios which enable them to address unmet IAM needs.

"With their proven success, commitment to product quality, training, and support Bridgestream, Eurekify & Vaau are ideal technology partners. With technical solutions that minimize the complexities of IAM projects, these partners enable us to rapidly demonstrate tangible results to customers," said Andrew Ames, Vice President of Sales and Marketing, Logic Trends. "Bridgestream, Eurekify and Vaau have provided us with the opportunity to expand our existing solution portfolio and meet new demands for identity and access management initiatives."
